Executive Summary & Analysis (AI-Generated Narrative)

Generated by an LLM from only the structured data in this report — see Methodology.

Executive Summary

The wallet (0xde0B...BAe) is 4,045 days old and holds 6,774.49 ETH, qualifying it as a “Whale” (95 % confidence). Its token portfolio is extremely concentrated, with USDT accounting for 99.44 % of the tracked USD value (≈ \$1,080). It also holds 910 NFTs across 100 collections, earning a “NFT Collector” label (90 % confidence). The overall risk score is 20, driven solely by the concentration factor.

Wallet Behavior

- Active on 60 of its 4,045 days (≈ 1.5 % of its lifespan).
- Average of 0.64 transactions per active day.
- All 200 retrieved transactions are inbound; no outbound activity is recorded.
- One dormant period is noted.

Portfolio Analysis

- 20 distinct tokens are present; 12 lack a known USD price and are excluded from valuation.
- Using USD value weighting, the top holding (USDT) represents 99.44 % of the calculated portfolio value.
- Remaining tracked assets (MANYU, HEX, Yee, ZIK) together comprise < 0.5 % of the USD value.
- Total tracked portfolio value is \$1,079.71.

NFT Analysis

- 910 NFTs are held across 100 different collections.
- The most represented collection accounts for 14

Transaction Analysis

Metric	Value
Total transactions (this page)	200
Incoming / Outgoing	200 / 0
Active days	60
Avg. transactions/day	0.64
Avg. transaction value (ETH)	0.0006
Largest transaction	0.0074 ETH (0xa2ac35b37c...)
Dormant periods (30+ days)	1

Token Portfolio

Concentration method: `usd_value` — top asset: 99.44% — total value: \$1,079.71

Symbol	Balance	USD Value	% of Portfolio
USDT	1,073.6441	\$1,073.64	99.44%
MANYU	1,000,000,000.0000	\$4.64	0.43%
HEX	1,104.7427	\$1.19	0.11%
Yee	69.0000	\$0.23	0.02%
ZIK	133.0000	\$0.02	0.00%
yRise	0.0001	\$0.00	0.00%

MALLY	2,094.6180	\$0.00	0.00%

...and 85 more collection(s).

Concentration below is by NFT COUNT per collection, not floor-price value — real market-value concentration requires a specialized NFT pricing source not yet integrated (see roadmap).

Behavior Classification

Heuristic patterns only — not definitive claims. A wallet may match several classifications at once.

Whale — confidence: 95%

- Holds 6,774.49 ETH ($\geq$ 100 ETH threshold)

NFT Collector — confidence: 90%

- Holds 910 NFTs across 100 collections

Highly Concentrated Wallet — confidence: 69%

- Top asset represents 99.44% of tracked usd value portfolio

Risk Indicators

Risk Score: 20/100

- Extreme portfolio concentration (99.4% in one asset) (+20)

No direct evidence of malicious activity was established. This score reflects heuristic patterns only and should not be treated as a fraud determination.

Data Limitations

- Wallet ownership is not necessarily known — one person may control multiple wallets, or multiple people may share one wallet.
- Token and NFT prices can be volatile; USD figures reflect a single point in time.
- Heuristic and derived metrics (e.g. token holdings from transfer history) can differ slightly from a live on-chain read and are labeled ESTIMATED where this applies.
- This report reflects data available at generation time and does not update automatically.
- 12 of 20 tokens have no known USD price and are excluded from the concentration calculation and total value.
- Concentration below is by NFT COUNT per collection, not floor-price value — real market-value concentration requires a specialized NFT pricing source not yet integrated (see roadmap).

Methodology & Data Sources

This report is generated from publicly available blockchain data. Heuristic classifications and derived metrics are pattern-based observations, not definitive claims, and are labeled with their confidence level throughout. No private keys, seed phrases, or non-public data were accessed to produce this report.
